

Programme Recovery & Turnaround

1. Rapid stabilisation, decisive leadership and a clear path back to predictable delivery.

Programmes rarely fail because of a single issue — they drift due to misalignment, unclear ownership, weak governance, unmanaged risks, or delivery momentum that has quietly eroded over time. When confidence drops, stakeholders lose clarity, teams lose direction, and delivery becomes reactive rather than controlled.

Programme recovery requires fast, structured intervention. I provide the leadership, assessment and stabilisation needed to restore control and rebuild delivery confidence.

2. What Programme Recovery Involves

Assessment & Diagnosis

A rapid, objective review of programme health, delivery blockers, governance gaps, team alignment, risk posture and stakeholder expectations. The goal is clarity — identifying what is working, what is not, and what must change immediately.

Stabilisation & Control

Re-establishing governance, decision pathways, delivery cadence, RAID discipline, and clear ownership. This phase restores structure and predictability so teams can execute without noise or confusion.

Recovery Roadmap

A concise, actionable plan that prioritises the interventions required to return the programme to a stable, confident delivery state. This includes scope realignment, replanning, dependency management and stakeholder reset.

Leadership & Momentum

Hands-on leadership to drive recovery actions, rebuild trust, and ensure delivery teams regain momentum. This is where confidence returns — through visible progress, controlled execution and transparent communication.

3. Typical Challenges Addressed

- Programmes experiencing delays or repeated slippage
- Misaligned stakeholders or unclear decision ownership
- Weak or inconsistent governance
- Delivery teams lacking direction or cohesion
- Risks unmanaged or repeatedly materialising
- Loss of confidence from sponsors or customers
- Major capability changes landing without readiness

4. Outcomes You Can Expect

- Restored delivery confidence and stakeholder alignment
- Clear ownership, governance and decision pathways
- Predictable delivery cadence and improved reporting clarity
- Reduced delivery risk and stronger operational readiness
- A programme environment that moves with purpose, not noise

5. Best For

Initiatives experiencing delays, misalignment, governance weaknesses or significant delivery uncertainty — especially where rapid stabilisation is essential.
