

Tesco – Nationwide Windows 11 Transformation Programme

Tesco embarked on one of the largest end-user technology modernisation programmes in UK retail history — a nationwide Windows 11 transformation covering 126,000 devices across stores, distribution centres, and corporate offices.

The initiative leveraged Microsoft Azure and Intune to deliver a secure, cloud-managed, and scalable desktop environment aligned with Tesco's digital-retail strategy

Programme Overview

The transformation aimed to modernise Tesco's end-user computing estate, enhance security, and improve operational efficiency across its entire UK footprint.

The rollout unified device management under Azure Active Directory and Intune, enabling centralised control, automated provisioning, and real-time compliance monitoring.

Key objectives included:

- Migrating 126,000 devices from legacy Windows 10 environments to Windows 11
- Integrating Azure AD and Intune for unified endpoint management
- Enhancing security posture through Zero Trust principles
- Streamlining deployment and support processes across all Tesco sites
- Delivering a consistent, high-performance user experience for store and office employees

Delivery Approach

Phase 1 – Assessment & Planning

- Conducted a full audit of the existing Windows 10 estate, including hardware readiness and application compatibility.
- Defined migration sequencing across retail, logistics, and corporate environments.
- Established governance and risk frameworks aligned with Tesco's IT security standards.
- Designed Azure-based automation workflows for device enrolment and policy assignment.

Phase 2 – Azure & Intune Integration

- Implemented Azure Active Directory for identity management and conditional access.
- Configured Microsoft Intune for device provisioning, compliance enforcement, and remote support.
- Developed standardised configuration profiles for store, warehouse, and office devices.
- Enabled self-service deployment and automated patching through cloud-based policies.

Phase 3 – Windows 11 Rollout

- Executed phased migration waves across 126,000 devices nationwide.
- Delivered pilot deployments in high-volume retail sites to validate performance and compatibility.

- Coordinated logistics for device refresh, imaging, and user transition.
- Provided multilingual training and adoption materials for store and office staff.

Phase 4 – Optimisation & Decommissioning

- Retired legacy Windows 10 infrastructure and associated management servers.
- Verified compliance and performance metrics through Azure dashboards.
- Implemented continuous improvement cycles for endpoint security and user experience.
- Delivered operational handover to Tesco’s managed service teams.

Outcomes

- Successful migration of 126,000 devices across all Tesco UK sites
- Unified endpoint management through Azure AD and Intune
- Enhanced security and compliance aligned with Zero Trust architecture
- Reduced operational overhead and improved support efficiency
- Consistent, modern Windows 11 experience for all employees

Strategic Impact

The Windows 11 transformation positioned Tesco to operate with greater agility, resilience, and security across its nationwide footprint.

By leveraging Azure and Intune, the programme delivered a cloud-connected, future-ready workplace — enabling Tesco’s workforce to collaborate seamlessly, respond faster, and innovate at scale.
