

DWP Portfolio – Enterprise IT Transformation Programme

The Department for Work and Pensions (DWP) embarked on a comprehensive technology transformation programme to modernise its enterprise infrastructure, enhance service delivery, and strengthen operational resilience across its national footprint.

This portfolio comprised multiple concurrent workstreams, each contributing to a unified, secure, and scalable digital environment.

Programme Scope

SQL Upgrade

Upgraded legacy SQL environments to current supported versions, improving performance, security, and maintainability.

Delivered automated migration scripts, schema validation, and post-upgrade optimisation across mission-critical databases.

Condeco Rollout

Implemented Condeco workspace management across DWP sites, enabling intelligent desk booking, meeting-room scheduling, and occupancy analytics.

Integrated with Active Directory and Exchange for seamless authentication and calendar synchronisation.

Unified Communications

Transitioned from Microsoft Communicator and Lync to Microsoft Teams, establishing a single, secure collaboration platform.

Delivered voice, video, and messaging capabilities with enterprise-grade reliability and compliance alignment.

Managed Print Services

Deployed a Managed Print solution across regional offices, consolidating print infrastructure and introducing secure print release, cost tracking, and sustainability reporting.

Achieved measurable reductions in print volume and operational overhead.

SharePoint Development

Developed and customised SharePoint Online sites for document management, workflow automation, and departmental collaboration.

Introduced metadata-driven search, version control, and Power Automate integration for streamlined business processes.

Business Continuity & Disaster Recovery (BC & DR)

Designed and tested comprehensive BC & DR frameworks, including failover simulations and recovery validation for critical systems.

Ensured compliance with government resilience standards and improved recovery time objectives (RTOs).

Quest Deployment

Implemented Quest migration and management tools to support Active Directory consolidation, user provisioning, and identity lifecycle management.

Enabled faster onboarding and reduced administrative complexity.

Wireless Access Point Deployment

Rolled out enterprise-grade wireless access points across DWP sites, delivering secure, high-performance connectivity for staff and visitors.

Integrated with network access control (NAC) and centralised monitoring for real-time visibility.

ITSM Integration

Integrated multiple service management platforms into a unified ITSM ecosystem, leveraging ServiceNow for incident, change, and asset management.

Provided end-to-end visibility, automation, and improved SLA compliance across IT operations.

Outcomes

- Modernised infrastructure supporting thousands of end-users nationwide
- Enhanced collaboration and communication through unified platforms
- Improved operational resilience and disaster recovery readiness
- Reduced costs through consolidation and automation
- Strengthened governance, compliance, and service transparency

Strategic Impact

The DWP Portfolio programme delivered a cohesive digital foundation enabling the department to operate with greater agility, efficiency, and resilience.

It aligned technology with organisational goals — empowering teams to deliver public services more effectively through a secure, modern, and connected workplace.
