

Computacenter – Strategic Secondments Portfolio

During my tenure at Computacenter, I undertook several high-impact secondments across service transition, transformation, project management, and pre-sales solution leadership. Each role contributed to the organisation's growth, operational maturity, and customer success across enterprise and public-sector accounts.

1. 🌱 Service Transition & Transformation Delivery Manager

Delivered complex service transitions and transformations for new and existing managed-service customers, ensuring seamless onboarding, operational readiness, and service stability.

1.1 Key Responsibilities & Achievements

- **New Business Take-On:** Managed transition from incumbent suppliers, aligning delivery with contractual and operational requirements.
- **Service Line Integration:** Introduced new service lines into existing managed-service frameworks, ensuring compatibility with ITSM processes.

- In-Life Enhancements: Delivered operational tooling upgrades, service-line improvements, and end-user functionality changes across ITSM disciplines — Incident, Request, Problem, Change, Release, MIM, and JML.
- Knowledge Transfer & Early-Life Support: Structured KT plans, runbooks, and early-life support frameworks to stabilise services post-go-live.
- Service Documentation: Authored service designs, operational manuals, service descriptions, and knowledge-base articles to underpin BAU support.
- AIS Governance: Ensured alignment with Acceptance Into Service (AIS) standards and Computacenter's service-readiness criteria.

2. **ServiceNow SME Project Manager**

Led the Professional Services ServiceNow Enablement Project, leveraging the platform's Project Management, Reporting, Financial, Time Recording, and Resource Management modules to support business growth and operational efficiency.

2.1 Key Responsibilities & Achievements

- GAP Analysis & Requirements Definition: Identified functional and process gaps, documented requirements, and developed business cases for enhancement.
- Use-Case Development: Defined and validated use cases to align ServiceNow capabilities with PS delivery models.
- Super-User & Champion Role: Supported testing, user adoption, and training across the PS business unit.
- Training & Enablement: Authored user guides, training modules, and adoption materials to accelerate platform maturity.
- Governance & Reporting: Established dashboards and reporting structures to improve visibility of project performance and resource utilisation.

3. European Central PMO Lead

Based in Belgium, led the design and implementation of a unified Central PMO (CPMO) service to support Computacenter's European clients, ensuring consistency, compliance, and scalability across regions.

3.1 Key Responsibilities & Achievements

- **Global CPMO Design:** Defined service descriptions, delivery SLAs, and governance frameworks for a unified European PMO model.
- **Regulatory Compliance:** Ensured adherence to ISO standards, CMS requirements, secure-client protocols, data protection, and GDPR.
- **Commercial Modelling:** Developed scalable cost models, benefit-realisation frameworks, and ROI analyses for new client proposals.
- **Competency Framework:** Introduced the APM Competency Maturity Assessment Framework, aligning with CPD and professional development standards.
- **Programme Management:** Delivered incremental service implementations using a hybrid Agile and Integrated Planning approach.
- **Training & People Development:** Designed course content and development frameworks to enhance PMO capability.
- **Governance & Assurance:** Created delivery processes, tools, and templates to standardise project execution.
- **Recruitment & Compliance:** Managed team recruitment, ensuring compliance with German Workers Council requirements.
- **Service Ownership:** Oversaw project-management platform selection, design, testing, and implementation, including third-party procurement and contractual decisions.
- **AIS Handover:** Delivered successful service handover to France under AIS governance.

4. Pre-Sales Solution Lead

Partnered with account management, solution architects, and service designers to deliver compelling, commercially viable bid responses for new business opportunities.

4.1 Key Responsibilities & Achievements

- **Requirements Gathering & Discovery:** Conducted structured workshops, interviews, and artefact reviews to capture functional, technical, operational, and commercial requirements.
- **Solution & Service Design:** Led end-to-end architecture and operating-model design covering application, data, integration, and service-management layers.
- **Cost & Resource Modelling:** Built detailed commercial models covering delivery effort, resource utilisation, third-party costs, infrastructure, licensing, and profitability.
- **CADRO Analysis:** Delivered comprehensive CADRO assessments — Constraints, Assumptions, Dependencies, Risks, Opportunities, and Limitations — feeding directly into SoW and governance.
- **Supplier Management & Procurement:** Coordinated supplier engagement, validation, and logistics planning to ensure commercial and technical alignment.
- **Statement of Work & Legal Review:** Produced contract-ready SoWs including scope, deliverables, acceptance criteria, and governance.
- **Technical Workshops & Business Case Support:** Facilitated architecture walkthroughs, service-model validation, and ROI justification for client approval.
- **BAFO & Negotiation:** Led pricing refinement, risk positioning, and negotiation sessions to secure profitable, deliverable agreements.
- **Client Presentation & Planning Workshops:** Delivered executive-grade presentations articulating solution value, delivery roadmap, and governance.
- **Revenue & Margin Management:** Maintained commercial discipline across revenue targets, retained margin, and cost control.

5. Strategic Impact

Across these secondments, I consistently delivered measurable improvements in service maturity, operational efficiency, and commercial performance.

Each engagement strengthened Computacenter's reputation for excellence in service transition, transformation, and solution delivery — combining technical depth, commercial acumen, and leadership across complex enterprise programmes.
