

Home Office – 32,000-Device Windows 10 Transformation

The UK Home Office embarked on a major end-user technology transformation, upgrading 32,000 devices across its national estate to Windows 10.

This programme modernised the department's desktop environment, strengthened security, and introduced cloud-based management and storage capabilities through SCCM, Intune, and Azure integration.

Programme Overview

The transformation was delivered under a structured, multi-phase approach, ensuring minimal disruption to critical Home Office operations while maintaining compliance with government security standards.

The initiative unified device management, improved performance, and enabled secure remote working across multiple agencies.

Key Deliverables

- **Device Upgrade:** Migrated 32,000 endpoints from legacy Windows 7/8 to Windows 10, ensuring compatibility with modern applications and security baselines.
- **SCCM & Intune Integration:** Implemented hybrid management architecture for automated deployment, patching, and compliance enforcement.
- **Cloud Storage Enablement:** Introduced secure OneDrive and Azure-based storage solutions, reducing reliance on on-premises infrastructure.
- **Identity & Access Management:** Strengthened authentication and policy enforcement through Azure AD and conditional access.
- **Operational Tooling:** Enhanced service management tooling for incident, request, and change processes.
- **User Adoption & Training:** Delivered communication campaigns, training sessions, and early-life support to ensure smooth transition.
- **Governance & Reporting:** Established dashboards for rollout progress, compliance, and user satisfaction metrics.

Security & Compliance Alignment

Windows 10's security framework was mapped directly to Home Office risk and compliance standards, ensuring alignment with public-sector security classifications.

The rollout introduced TPM 2.0, BitLocker encryption, and advanced identity management, strengthening endpoint protection across all operational sites.

Outcomes

- Modernised desktop experience for 32,000 users
- Improved endpoint security and compliance posture
- Reduced operational overhead through automation and cloud management
- Enhanced mobility and remote-work capability
- Established a scalable foundation for future digital-workplace initiatives

Strategic Impact

The Windows 10 transformation positioned the Home Office to deliver a consistent, secure, and high-performance user experience across its national operations.

It reinforced the department's commitment to innovation, resilience, and digital transformation — enabling staff to work smarter, faster, and more securely.
