

HSBC – Global Windows 11 Rollout & User Adoption Programme

HSBC undertook one of the largest end-user technology transformations in its history — a global rollout of Windows 11 to 46,000 users across 750 locations. The programme aimed to modernise the desktop experience, strengthen security, and enable a more agile, cloud-connected workforce across the bank’s global operations.

This initiative was not just an operating-system upgrade; it was a strategic transformation designed to align HSBC’s workplace technology with its digital-banking vision.

Programme Overview

The rollout was delivered through a structured, phased approach, ensuring minimal disruption to business operations while maintaining compliance with HSBC’s stringent security and regulatory standards.

Each region — from London to Hong Kong, New York, and Dubai — transitioned through controlled waves, supported by robust communication, training, and adoption frameworks.

Key Deliverables

- **Global Deployment:** Windows 11 deployed to 46,000 users across 750 locations worldwide.
- **Modern Device Refresh:** Replaced legacy hardware with secure, high-performance devices optimised for Windows 11.
- **Enhanced Security Baselines:** Implemented TPM 2.0, BitLocker, and advanced identity management aligned with HSBC's global cybersecurity policies.
- **ServiceNow Integration:** Automated incident, request, and change workflows for rollout tracking and support.
- **User Adoption Programme:** Delivered multilingual training, digital champions network, and feedback loops to ensure smooth transition.
- **Performance & Reliability Improvements:** Reduced boot times, improved endpoint stability, and enhanced remote-work experience.
- **Governance & Reporting:** Established global dashboards for rollout progress, compliance, and user satisfaction metrics.

Transformation Approach

The programme was executed through incremental regional go-lives, leveraging automation and analytics to monitor deployment success.

A dedicated User Adoption Office coordinated communications, training, and engagement, ensuring employees understood new features such as Snap Layouts, Teams integration, and enhanced security controls.

Security & Compliance Alignment

Windows 11's security architecture was mapped directly to HSBC's enterprise risk framework, ensuring compliance with financial-sector regulations and internal audit standards.

The rollout strengthened endpoint protection, identity assurance, and data-loss prevention across all regions.

Outcomes

- Modernised desktop experience for 46,000 users
- Improved endpoint security and compliance posture
- Reduced operational overhead and support demand
- Enhanced productivity and collaboration through Microsoft 365 integration
- Established a scalable foundation for future digital-workplace initiatives

Strategic Impact

The Windows 11 rollout positioned HSBC to deliver a consistent, secure, and high-performance user experience globally.

It reinforced the bank's commitment to innovation, resilience, and digital transformation — enabling employees to work smarter, faster, and more securely in a modern financial-services environment.
