

# DWP Portfolio –

# Enterprise IT Transformation Programme

A secure, scalable foundation for modern public-service delivery

## DWP Portfolio – Enterprise IT Transformation Programme

### Executive summary

The Department for Work and Pensions (DWP) undertook a comprehensive technology transformation to modernise its enterprise infrastructure, enhance service delivery, and strengthen operational resilience across its national footprint.

#### Key facts

**Client:** Department for Work and Pensions (DWP)

**Programme:** Enterprise IT Transformation Programme

**Focus:** Infrastructure modernisation, collaboration, workplace technology, resilience, identity, connectivity, and service management

### Programme context

The portfolio brought together multiple concurrent workstreams to create a unified, secure, and scalable digital environment for DWP.

---

### Programme scope

The programme addressed connected priorities across enterprise infrastructure, workplace technology, collaboration, identity, connectivity, resilience, and IT service management. Each workstream delivered a distinct operational improvement while contributing to the wider transformation.

## SQL Upgrade

**Challenge.** Legacy SQL environments required migration to current supported versions across mission-critical databases.

**Delivery.** The workstream delivered automated migration scripts, schema validation, and post-upgrade optimisation.

**Operational value.** The upgrade improved database performance, security, and maintainability.

## Condeco Rollout

**Challenge.** Workspace management across DWP sites required more intelligent coordination of desks and meeting rooms.

**Delivery.** Condeco was implemented to support desk booking, meeting-room scheduling, and occupancy analytics, with integration to Active Directory and Exchange.

**Operational value.** The rollout enabled seamless authentication and calendar synchronisation while improving visibility of workspace usage.

## Unified Communications

**Challenge.** DWP needed to transition from Microsoft Communicator and Lync to a single collaboration platform.

**Delivery.** The programme established Microsoft Teams as a secure platform for voice, video, and messaging.

**Operational value.** The transition provided enterprise-grade reliability and alignment with compliance requirements across collaboration services.

## Managed Print Services

**Challenge.** Print infrastructure across regional offices required consolidation alongside stronger control of print activity.

**Delivery.** A Managed Print solution introduced secure print release, cost tracking, and sustainability reporting.

**Operational value.** The workstream achieved measurable reductions in print volume and operational overhead without compromising secure access to printing.

## SharePoint Development

**Challenge.** Departments required stronger support for document management, workflow automation, and collaboration.

**Delivery.** SharePoint Online sites were developed and customised with metadata-driven search, version control, and Power Automate integration.

**Operational value.** The solution streamlined business processes and supported more effective departmental collaboration.

## Business Continuity & Disaster Recovery

**Challenge.** Critical systems required tested continuity arrangements and validated recovery capability.

**Delivery.** Comprehensive BC & DR frameworks were designed and tested through failover simulations and recovery validation.

**Operational value.** The workstream supported alignment with government resilience standards and improved recovery time objectives.

## Quest Deployment

**Challenge.** Active Directory consolidation, user provisioning, and identity lifecycle management required a more efficient operational approach.

**Delivery.** Quest migration and management tools were implemented to support these activities.

**Operational value.** The deployment enabled faster onboarding and reduced administrative complexity.

## Wireless Access Point Deployment

**Challenge.** DWP sites required secure, high-performance connectivity for staff and visitors.

**Delivery.** Enterprise-grade wireless access points were rolled out and integrated with network access control and centralised monitoring.

**Operational value.** The deployment delivered secure connectivity and real-time visibility across the wireless environment.

# ITSM Integration

**Challenge.** Multiple service-management platforms needed to operate as a unified ITSM ecosystem.

**Delivery.** ServiceNow was used for incident, change, and asset management, integrating service-management capabilities across IT operations.

**Operational value.** The integration provided end-to-end visibility, automation, and improved SLA compliance.

---

## Delivery approach

The concurrent workstreams complemented one another across the technology estate. Infrastructure modernisation strengthened the underlying platform, while collaboration and workplace technology improved how people connected and worked. Identity and connectivity initiatives supported secure access, business continuity and disaster recovery strengthened resilience, and ITSM integration brought greater visibility and automation to day-to-day operations.

## Outcomes

- **Modernised infrastructure** supporting thousands of end-users nationwide
  - **Enhanced collaboration and communication** through unified platforms
  - **Improved operational resilience** and disaster recovery readiness
  - **Reduced costs** through consolidation and automation
  - **Strengthened governance, compliance, and service transparency** across IT operations
- 

## Strategic impact

The DWP Portfolio programme delivered a cohesive digital foundation that enabled the department to operate with greater agility, efficiency, and resilience. It aligned technology with organisational goals and empowered teams to deliver public services more effectively through a secure, modern, and connected workplace.

## Closing takeaway

By connecting infrastructure, collaboration, workplace technology, identity, connectivity, resilience, and service management into one portfolio, DWP established a stronger foundation for enterprise transformation in a public-service environment. The integrated approach demonstrates how coordinated technology improvements can create practical operational value while supporting secure and effective service delivery.
